## SUMMARY

---

Business Intelligence Engineer / Data Analyst with 6+ years building advanced SQL and Amazon Redshift transformations, ETL pipelines, dimensional data models, and automated reporting across Amazon-scale operational datasets. Deep experience in Amazon QuickSight, Tableau, and Power BI dashboards supporting Weekly Operational Reviews (WBR) and leadership scorecards; skilled in metric validation and reconciliation, root-cause investigation of metric discrepancies, and applying generative AI / LLM-assisted analytics for anomaly investigation and self-service reporting.

## TECHNICAL SKILLS

---

**SQL & Warehousing:** Advanced SQL, Amazon Redshift (query optimization, transformations), MySQL, SQL Server, Snowflake, Oracle, Dimensional Modeling, Star Schema, Staging Layers, ETL/ELT Pipelines, dbt, Data Warehousing

**BI & Visualization:** Amazon QuickSight, Tableau, Power BI (DAX, Power Query), Advanced Excel; Executive Scorecards, WBR/QBR Reporting, Self-Service Dashboards

**Programming & Statistics:** Python (Pandas, NumPy, Scikit-learn), R (tidyverse, statsmodels), VBA; Statistical Analysis, Time-Series, Regression

**Cloud & DevOps:** AWS (Redshift, S3, EC2, Lambda), Azure Fabric, Git

**AI & Data Quality:** Generative AI / LLM-Assisted Analytics, Anomaly Detection & Investigation, Metric Validation & Reconciliation, Data Governance, Automated Validation Checks, Power Automate

## PROFESSIONAL EXPERIENCE

---

### Research Assistant – AI Model Adoption

Cleveland State University

Cleveland, OH

Jan 2026 – Present

- Engineered a panel time-series dataset (75 AI models, 821 daily observations, 67 features) by mining and integrating heterogeneous sources (npm, HuggingFace, GitHub APIs) with Python and R ETL pipelines.
- Designed end-to-end ingestion pipelines with versioned schema scripts automating data collection, transformation, and validation for technology adoption forecasting models.
- Investigated and documented cross-source metric discrepancies (package contamination, snapshot bias, contributor-count anomalies) and established data integrity protocols that prevented downstream modeling errors.

### AI Trainer – Data & Analytics Domain

Handshake AI (Stripe)

Remote

Mar 2026 – Present

- Conduct rubric-based evaluations of frontier LLM responses on SWE-Bench and terminal-agent benchmark tasks, grading across accuracy, reasoning, and communication dimensions with written justifications and preference rankings.
- Author golden solutions, failing test cases, and challenging multi-step command-line tasks that expose model failure modes, producing evaluation data used to benchmark and improve frontier LLM performance.
- Write realistic domain prompts and grading rubrics to identify where models fail on complex analytical questions, building hands-on judgment for deploying LLM-assisted anomaly investigation and reporting responsibly.

### Data Analyst & BI (Sales Operations Co-op)

Bendix Commercial Vehicle Systems

Avon, OH

Jan 2025 – Dec 2025

- Designed automated ETL pipelines extracting from multiple upstream source systems (SharePoint, CRM, SAP HANA), applying SQL transformation and validation logic across 100K+ records with zero-error migration, 2 weeks ahead of schedule.
- Built star-schema data models and staging layers in Power BI; defined governance standards (documented KPI definitions, DAX measures, automated validation checks) sustaining 99%+ metric accuracy for leadership reporting.
- Built automated SQL reporting pipelines for monthly business reviews serving program managers and sales leadership, reducing recurring report preparation from 6 hours to 25 minutes and improving on-time delivery.

- Built a monthly tariff reporting pipeline in Power BI and Excel for key accounts (Daimler, PACCAR, Volvo, Blue Bird); partnered with Account Managers and Sales Finance Directors to translate ambiguous questions into defensible metrics.
- Automated survey and data refresh workflows via Power Automate, saving 2.36 hours/day; resolved data quality issues through EDA and normalization, increasing reporting reliability by 35% and shortening analysis cycles by 50%.

**Machine Learning Data Analyst (Promoted from ML Data Associate, Oct 2020)**  
*Amazon Development Centre*

Chennai, India  
Nov 2019 – Mar 2023

- Wrote and optimized complex Amazon Redshift SQL transformations and data quality tests across large, multi-dimensional operational datasets, improving pipeline reliability and contributing to a 40% gain in downstream ML model accuracy.
- Designed real-time KPI dashboards in Amazon QuickSight tracking 10+ operational metrics across high-volume streams, cutting reporting lag 40% and enabling self-service metric exploration for non-technical audiences.
- Validated and reconciled metrics before leadership reviews; applied statistical analysis and SQL EDA to isolate performance drivers, driving 20% higher customer satisfaction and 15% higher retention.
- Led onboarding and best practices for 20+ analysts, standardizing SQL coding patterns, dashboard usage, and data quality SOPs; maintained 99.8% accuracy across 100,000+ records in weekly reporting frameworks.

**Data Analyst**  
*Gharib Shipping Services LLC*

Chennai, India  
Jul 2017 – Oct 2019

- Conducted exploratory data analysis on 70,000+ historical records using SQL to identify bottlenecks in warehouse and shipping operations, improving efficiency by 15% and reducing monthly costs by \$2K.
- Independently built and maintained recurring operational reports and data validation frameworks supporting leadership decisions; established data consistency standards across multiple operational systems.

EDUCATION

**Master of Information Systems**, Cleveland State University, Cleveland, OH – GPA: 3.94/4.00 Aug 2023 – Dec 2025  
*Coursework: Business Intelligence Systems, Data Visualization, Modern Database Design, Machine Learning*

**Bachelor of Technology, Aeronautical Engineering**, BSA Crescent Institute, Chennai, India Jun 2013 – Jun 2017

SELECTED PROJECTS

**AI Model Adoption – Panel Time-Series Forecasting** (*Python, R, pandas, statsmodels*)

2026

- Integrated 5+ heterogeneous sources (npm, HuggingFace, GitHub, AIID) into automated ingestion pipelines with documented data quality controls, supporting technology adoption forecasting across 75 AI models.

**Digital Divide: Broadband & Social Vulnerability** (*R, Python, SQL, Tableau, ArcGIS*)

2025

- Built multi-source SQL and R pipelines joining FCC, CDC, and Microsoft datasets across 3,000+ U.S. counties; visualized broadband disparity insights in interactive Tableau dashboards with parameters and drill-downs.

CERTIFICATIONS

Microsoft Certified: Fabric Data Engineer Associate (DP-700)

Dec 2025

Google Data Analytics Professional Certificate

Oct 2024

Oracle Cloud Data Management Certified Foundations Associate

Nov 2023
